

CASE STUDY

Payroll Management Solution for one of the UK's Largest Civil Engineering Companies

THE CUSTOMER'S REQUIREMENT

One of the UK's largest civil engineering firms was unsure of the accuracy of much of its costs as presented to it by sub-contractors. It wanted to be sure that it was not being overcharged, particularly as the sub-contractors' systems themselves were not especially robust.

THE SOLUTION

To begin with the solution was very similar to that provided for the Ports logistics firm (qv) – a clocking on system that had the facial biometric checking to greatly increase accuracy. However, it soon became clear that, while this was an excellent first step, there were additional features that could be added. These included:

- adding further information to the database of staff and sub-contractors so that their timesheets could be both generated and differentiated.
- providing facilities automatically to pass timesheet information through to a payroll facility.

THE BENEFITS

The benefits were and are huge. They include:

- vastly more accurate information on staff and sub-contractor activity.
- considerable savings of time in generating timesheet and payroll data.
- enormous improvements in the accuracy of that data.
- savings far greater than anticipated.

This firm now uses these systems on all its major sites. It prides itself on completing huge projects to time and on budget. We are proud that we make a significant contribution to that.
